Time- 10:00 AM - 5:30 PM

Last Date of Registration
2 December 2026, 5:30pm

Who can attend:
Teachers, Architects and Allied Professionals

PREAMBLE

Architectural services play a key role in building design and management. In today's advanced technology and comfort-oriented conditions, every human being needs hassle-free coordination of all services in their living/working premises.
This workshop bridges the gap between design and implementation, and management with current professional needs.

OBJECTIVES

- Understanding fire safety principles, disaster preparedness, and risk mitigation strategies.
- Familiarization with NBC guidelines, IS codes, and statutory fire safety requirements.
- Developing fire-safe architectural planning, spatial compartmentation, and evacuation strategies.
- Understanding active and passive fire protection systems, materials, and safety technologies.
- Learning fire safety audits, NOC procedures, and emergency response planning.
- Integrating fire safety and disaster resilience into architectural education and professional practice.

KEY TAKEAWAYS

- Ability to apply fire safety principles and risk mitigation strategies in architectural design.
- Knowledge of NBC guidelines, relevant IS codes, and statutory fire safety regulations.
- Effective planning of fire-safe buildings through compartmentation and evacuation strategies.
- Understanding of active and passive fire protection systems, materials, and technologies.
- Awareness of fire safety audits, NOC procedures, and emergency management practices.
- Integration of fire safety and disaster resilience into architectural planning and professional practice.
